

Redcello's Disaster Recovery Strategic Partners

What's holding you back from implementing Disaster Recovery (DR) solutions for your business?

Many businesses are reluctant to commit to DR planning:

"DR is expensive and I can't see what ROI my business can expect."

DR isn't about generating ROI – it's about protecting your business. Close to 40% of SMEs that experience a disaster go out of business if they can't access their data within 24 hours*. This means that when disaster strikes, you need to get your business up and running quickly to survive.

Our DR Solutions

Incorporate rapid, reliable, and cost-effective services which are easy to implement. With Redcello's DRaaS offering, your business data can be recovered within minutes rather than hours or days, and you can enact your disaster recovery systems at the click of a button.

We offer comprehensive self-service capabilities which allow you to fully manage your environment. You can test whenever you like, and initiate DR when required.

"I don't need a DR solution – we replicate all business data and have regular off site backups."

Replicated data and off site backups aren't enough to guarantee DR and business continuity.

Our DR Solutions

Include comprehensive protection of application or services replicated to the Redcello Cloud. After any DR event, your application will be fully recovered to your original systems. You can DR anything to the Redcello cloud: Physical or Virtual, Windows or Linux, VMware or HyperV, we've got it covered.

Redcello's Disaster Recovery as a Service (DRaaS) provides leading DR solutions and automation tools for managed customer environments. Our team has extensive experience in providing DR consulting and implementing solutions for large organisations worldwide.

"It's too great a strain on my IT resources, and would disrupt my day to day business activities."

DR shouldn't interfere with your business activities – the best solutions will actually work around your needs.

A list of supported source systems are available on request.

Our DR Solutions

Offer regular one-click non-disruptive testing into an isolated network pool. This means you can fully test the environment without disrupting the production systems. As a result, the impact of DR tests on your business and IT staff is minimised, and you can ensure the DR plan fully complies with all your business requirement.

How will Redcello implement a DR plan for my business?

Our DRaaS is primarily based around Zerto for VMware environments

Redcello works to ensure that your business is secure and reliable. Maximising uptime.
