

## Redcello's Virtual Datacentre (vDC) Strategic Partners

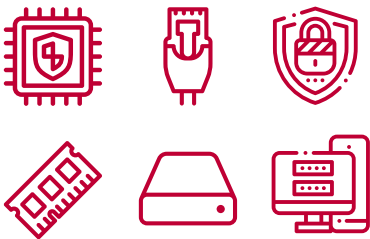

### What is a Virtual Datacentre (vDC)?

A vDC is a pool of cloud resources specifically designed for enterprise business requirements. Each vDC gives you access to pools of Compute, Memory, Storage, Network, Security and Virtual machines. This provides a truly scalable environments that varies in line with your computing requirements

### Why should I use Redcello's Virtual Datacentre (vDC) service?

#### Our virtual datacentre:

The vDC is configured and managed via a secure Internet portal which allows full control over you cloud environment. Our vDCs are hosted in secure UK-based datacentres and built on fully redundant enterprise hardware. This gives you exceptional availability, quality of service, and low latency connectivity.

#### With our vDC service you can::

- Create virtual servers and virtual applications (vApps) as required, on demand
- Scale resources for virtual applications as demand requires
- Template applications as demand requires
- Template applications for rapid deployment and development
- Operate as a stand alone environment or integrate with your existing IT implementation
- Manage your environment with full control over compute resources

### How does Redcello's Virtual Datacentre service work?

Our vDCs can be fully customised to suit our customers' business requirements. Once resources have been assigned to the initial vDC, it can be used in the way that best works for you. Services can be deployed rapidly from our pre-build service catalogue that will have you up and running in minutes; alternatively, they can be copied or transferred from your existing IT services.

Connectivity can be provided in numerous ways, from the vDC being its own isolated entity through to it being an extension of your existing network connect via Site-to-Site VPN, MPLS, or leased line connection. Direct internet feeds as well dedicated IPv4 and IPv6 addresses area available to cater for all your network connectivity requirements

### Why should I use Redcello's Virtual Datacentre (vDC) service?

#### With our vDC service, you can expect:

Increased	Reduced	Improved
<ul style="list-style-type: none"><li>• Business agility: you can scale resources as required to meet business demands</li><li>• Resilience over traditional server technology</li><li>• Productivity: new services can be deployed in minutes rather than days or weeks</li></ul>	<ul style="list-style-type: none"><li>• CapEX: there is no hardware investment</li><li>• Total cost of ownership – you only pay for the resources that are required with no need to over-provision to cater for spikes and variations</li><li>• Operational overhead: administration is reduced as there is no physical infrastructure that you need to manage</li></ul>	<ul style="list-style-type: none"><li>• Resilience for cloud based services</li><li>• Time to market, rapid deployment and templates make new services much faster to deploy</li><li>• Business continuity and disaster recovery</li></ul>

We offer a 24/7/365 service with flexible connectivity across a range of Operating Systems including Windows 2008, Windows 2012, Redhat Enterprise Linux, Ubuntu and Centos
